<b>Project contents and requisite skills</b>	
<p>The project consists in the programming of audio signal processing algorithms in Python. The candidates are expected to develop Python modules that implement diverse audio processing algorithms, and to compare processing results with those obtained using other platforms such as Matlab. The developed modules are to be shared via GitHub.</p> <p>Candidates are expected to be proficient in basic digital signal processing techniques (digital filters, DFT, etc.), to have experience in high-level programming, and to know the basic characteristics of audio signals.</p>	
<b>Expected learning outcomes</b>	
<ul style="list-style-type: none"><li>• Develop signal processing algorithms in Python.</li><li>• Use a version control and code sharing system.</li><li>• Analyze and critically evaluate numerical results.</li><li>• Write a technical/academic report.</li><li>• Perform an oral presentation of the work carried out.</li></ul>
